PETAL-II End-End Trials Specifications V2.6

SUMMARY

As reported at the fourteenth meeting of ATNP WG3 under agenda item 4.2 "Review Trials and Implementation Activities", the PETAL-II (Preliminary Eurocontrol Test of Air/ground data Link, Phase II) End-to-End Trials Specifications are made available to the Working Group. These provide detailed information on this major implementation project which is taking place at Eurocontrol's operational Maastricht Upper Air Centre and also serve as an example of the type of specification which is needed in addition to the Doc 9705 provisions in order to implement interoperating ground and airborne operational services.

Due to the size and the specialised nature of the specifications, and the fact that they are only provided for the information of interested members of WG3, the specifications are provided in soft copy only, and will be posted on the WG3 directory of the file server.

The provided PETAL-II End-to-End Trials Specifications, version 2.6 and the information contained therein is the property of EUROCONTROL. Any reproduction or other use of this material shall acknowledge the PETAL-II Project and EUROCONTROL as the information sources.

Further information and updates may be obtained from the PETAL-II website at <http://www.eurocontrol.be/projects/eatchip/petal2>
